

Welcome to the **September 2026** edition of **SDEX Pulse**.

This month, we highlight three powerful capabilities of SDEX Document Management System (DMS) that help organizations streamline operations, ensure compliance, and drive greater productivity.

Notifications & Alerts

Notifications and alerts keep users informed about pending approvals, document updates, expirations, and workflow actions in real time.

Benefits:

Automated reminders ensure important tasks are not missed and deadlines are consistently met.

Improves responsiveness, reduces delays, and enhances process visibility.

Document Retention & Archival Management

Automated retention policies ensure documents are preserved for the required duration and removed when no longer needed.

Benefits:

Reduces storage overhead, and improves lifecycle governance.

Supports regulatory compliance.

Document Templates & Standardization

Document templates and standardization allow organizations to create predefined formats for frequently used documents such as contracts, forms, invoices, and letters.

Benefits:

Ensure consistency in branding, structure, and content across departments.

Minimizes manual effort, formatting errors, and improves document quality.

Smarter document processes. Stronger compliance. Better business outcomes.

With **SDEX DMS**, every document. Every process. Every time.
